Docket No. AUS920030619US1

ABSTRACT OF THE DISCLOSURE

METHOD, SYSTEM, AND PRODUCT FOR IDENTIFYING, RESERVING, AND LOGICALLY PROVISIONING RESOURCES IN PROVISIONING DATA PROCESSING SYSTEMS

A method, system, and computer program product are disclosed for logically provisioning resources in a data processing system. A request for one or more resources to be provisioned in a provisioning environment is received. The requested resources may be of multiple different available types of resources. Particular instances of the requested types of resources are selected from a group of different types of unassigned available resources. The selected resources are indicated as being reserved, and thus no longer unassigned or available, to fulfill this request. The selected resources are then logically provisioned by establishing logical relationships between the selected resource instances in the provisioning environment.
